

PROCESS RUNNER

Powerful SAP financial integration that works out of the box

Solution Benefits

- Upload and download data, information and events
- Supports mass data creation, changes, updates, verification, etc
- Point and click interface - no programming or scripting required
- Works out of the box

Broad Coverage - Use Transaction or BAPIs:

Process Runner allows you to use any transactions, not just popular ones like F-02, FB50, FB60s. Get efficiency and security across your entire SAP landscape. You may also choose to use Business APIs both SAP delivered and any custom BAPIs you have created.

Individual Line Level Error Checking:

Run your document in test mode and quickly perform individual line level or whole document checks (and see ALL errors, header and line level, with Process Runner simulation). Find and address line level errors and issues quickly before attempting to post the whole document. Alternatively, post with Process Runner, then capture and automatically process only those records with errors.

Automatic Support for Lines More Than 999 Lines:

Process Runner's configurable Dynamic Row Splitter (DRS) automatically splits your oversized document in multiple parts to conform with SAP's limit of maximum 999 lines.

Support for COPA assignments, User Exists and Customization:

Process Runner supports CO-PA field assignments and will use all the business logic you implemented in User Exists or enhancements you did to your SAP screens.

Solution Overview

Innowera's Process Runner dramatically reduces on-going costs and optimizes efficiencies by automating day-to-day data maintenance and migration operations between your **SAP** and **Microsoft Excel** systems.

Audience

CFO, Corporate/Divisional Controller, Data and Process owners, SAP business analysts, SAP data conversion teams, SAP deployment teams.

"Smart Solutions for Your SAP - FI Automation Needs"

Process Runner offers broad coverage for SAP Financial master and transactional data creation, maintenance, analysis and monitoring.

Process Runner enables automation for SAP Transaction, BAPI, GUI Scripting and Data Extraction tasks from one seamless application.

SOX Compliant:

Process Runner implementation will be as SOX compliant as your SAP implementation is – we respect SAP governance.

Automatic Handling of Posting keys and Cross Company codes:

Creating process files that are able to handle many different posting keys is a daunting task, and adding a cross company code adds further twists. Process Runner includes automatic mapping capabilities for over 50 posting keys without complicated recording and mapping. Cross company code data is also handled automatically with a click of a button. Simplifies mapping and recording for transactions such as F-02, FB50, FB01, etc.

Ready to Run Templates:

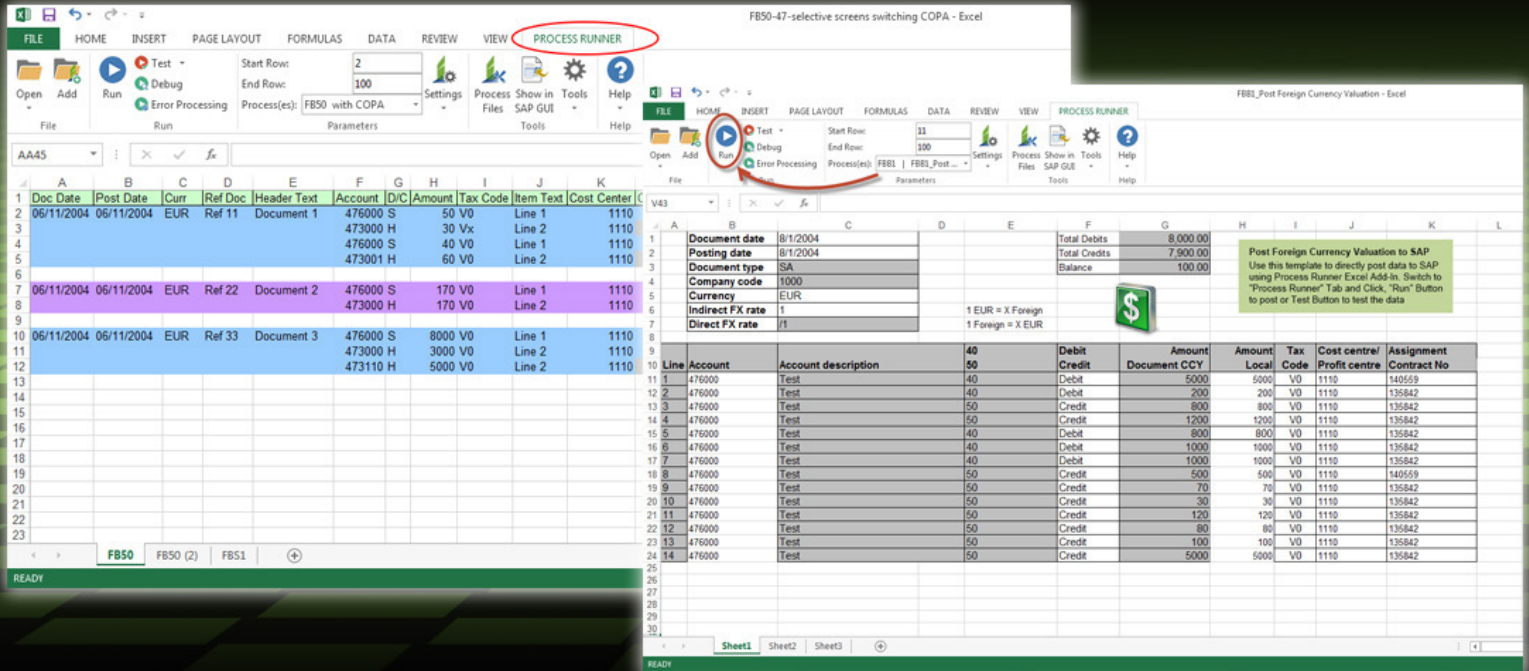

Process Runner has ready to use templates that will get you started in no time. We have hundreds of templates and are frequently adding more to our Cloud sample store. Templates allow you start using popular financial transactions such as FB01, F-02, FB50, FV50, FB51, FBB1, FB60, FB65, FB70, FB75, FBD1 etc. immediately. You will also have access to ready to use templates for some of the popular Financial Business APIs. These templates come with sample data stored in Excel format with all the required recording and mapping already done. Download your free trial now and immediately feel the power of simplification.

Zero ABAP - Works out of the Box:

Process Runner works out of the box. You install on your desktop and if you have required SAP security, you are ready to go in minutes. No custom ABAP means one less thing to worry about.

Run SAP Directly from Excel

Users can run SAP directly from Excel without having to use any other application. You can upload or download to and from SAP. Excel Add-in uses existing SAP security and user credentials that you have in place. Simplify user adoption as they will work with SAP directly from Excel all the time. Use Transactions, Business APIs, GUI Scripting or Data Extractor technologies of Process Runner

Solution Highlights

Click and Run - No Programming Required:

Process Runner supports SAP data management by recording, mapping and executing across Transactions, BAPIs, RFMs, and GUI Scripting. Process Runner supports all SAP releases from 4.6c and supports standard as well as custom transactions, BAPIs and RFMs.

Smart and Broad Mapping Types:

Process Runner provides an intuitive user-experience and supports multiple mapping types for custom and standard Transactions, RFMs, BAPIs and GUI scripted processes across the entire SAP landscape.

On-Demand Scheduling:

Advanced frameworks that enable automation and scheduling of script execution for flexibility and control.

Embedded Excel Books:

Excel books embedded in Process Runner provide powerful and robust functionality without having to leave Process Runner for ease-of-use.

Share and Collaborate:

Integrated central file/ template repository. Enables users to share, manage and control Process Runner files to enhance team productivity.

Parallel Processing:

Enables parallel script execution across multiple transactions, BAPIs, RFMs or GUI Scripted processes for high efficiency and productivity.

Data Checks & Validation:

Perform data existence and validation checks to enable accuracy while uploading data to SAP systems.

Multi-lingual Support:

Process Runner supports European languages such as French, German and Spanish. In addition, Process Runner is Unicode compliant and supports Japanese, Chinese and other kanji languages.

Highly Secure & Scalable:

Leverages and preserves in-built SAP systems security to provide application integrity. Process Runner is built on a secure framework and is scalable for large enterprises.
